

We attract outstanding people with strong technical skills and creative vision. Our diverse operations provide unique challenges and exciting opportunities. Around the world, our employees are challenged and inspired to achieve their best – they are exceptional people managing strong assets. A career with Vermilion Energy means competitive compensation, outstanding opportunities, and high personal satisfaction.

Senior Facilities Engineer

Reporting to the Director, Production and Operations in Calgary, the Senior Facilities Engineer will provide primary technical and project management support for the development and operation of Vermilion oil and gas facilities. The ideal candidate will be a highly motivated, detail and results oriented individual with a B. Sc. in Engineering with professional designation and 15+ years facilities engineering and project management experience. Primary responsibilities for this role include:

- Project management of Vermilion gas and oil facilities and associated sales and gathering system pipeline projects;
- Providing technical support and project management of properties and projects in Canada;
- Directing and implementing asset management programs for ongoing production facilities including ABSA QMP, Electrical QMP, Pipeline Operations and Maintenance programs;
- Overseeing the engineering, procurement and construction of company operated facility projects;
- Preparation and development of project design and cost work to support the exploitation activity of the company;
- Participating in and contributing to the planning of exploitation and operational development activities to ensure technically appropriate design and cost information for facility components;
- Development of facility requirements for capital budget programs; and
- Participation in due diligence activity in support of potential business acquisitions, including review and evaluation of the facilities associated with property acquisitions.
